

ABSTRACT OF THE DISCLOSURE

An image data communication apparatus is connected to an image data source and to a network, and transmits image data attached to an e-mail to a receiving apparatus via the network. The e-mail including a mail from command and a mail message. The image data is attached to the e-mail as an openable document. The image data communication apparatus comprises a memory which stores information regarding an identification of at least one user of the image data communication apparatus and a mail address of the at least one user, and a panel section which selects the information regarding an identification of at least one user and the mail address of the at least one user stored in the memory. The image data communication apparatus comprises a controller which sets information regarding the identification of the user and the mail address of the user selected by the panel section, into the mail message of the e-mail to which the image data is attached.
